**DETAILED ACTION**

1. The Applicant's supplemental amendment filed on November 22, 2010, was received. Claims 1, 3-10 and 15-21 have been amended. Claims 25-67 have been added as new. Therefore, Claims 1-67 are pending in this office action.
2. The text of those sections of Title 35, U.S.C. code not included in this action can be found in the prior Office Action issued on March 18, 2010.

***Claim Rejections - 35 USC § 102***

3. The rejection of Claims 1-9, 11-13 and 24 under 35 U.S.C. 102(b) as being anticipated by Pratt et al. (US 2003/0194589 A1) has been overcome based on the amendments to the claims and the arguments presented on pages 18-26 of the Remarks dated November 22, 2010.
4. The rejection of Claims 1-4, 6, 8, 10, 14-16, 18, 20, and 22-24 under 35 U.S.C. 102(b) as being anticipated by Yamashita (JP 2002-190308) has been overcome based on the amendments to the claims and the arguments presented on pages 18-26 of the Remarks dated November 22, 2010.

***Claim Rejections - 35 USC § 103***

5. The rejection of Claims 17, 19 and 21 are rejected under 35 U.S.C. 103(a) as being unpatentable over Yamashita (JP 2002-190308), as applied to claims 1-4, 6, 8,

10, 14-16, 18, 20, and 22-24, and in further view of Pratt et al. (US 2003/0194589 A1)

has been overcome based on the amendments to the claims and the arguments  
presented on pages 18-26 of the Remarks dated November 22, 2010.

***Reasons for Allowance***

6. Claims 1-67 are allowed.
7. The following is an examiner's statement of reasons for allowance: the instant invention of Claim 1 is to a fuel cell system comprising: a fuel cell; a load value detecting means configured to detect a load value of a load of electric power or heat which is generated by equipment supplied with the electric power or the heat from said fuel cell system; a load value storage means configured to store a history of the load value detected by said load value detecting means; and a load value predicting means configured to predict a load value which is going to be generated based on the history of the load value and to store the predicted load value as load value data; and an operation control means configured to decide scheduled start-up time of said fuel cell based on the load value data predicted by said load value predicting means. Claim 60 is drawn to a method of operating a fuel cell system comprising a fuel cell, comprising the steps of: (a) detecting a load value of a load of electric power or heat which is generated by equipment supplied with the electric power or the heat from said fuel cell system; (b) storing a history of the load value detected in step (a); (c) predicting a load value which is going to be generated based on the history of the load value and storing

the predicted load value as load value data; and (d) deciding scheduled start-up time of said fuel cell based on the load value data predicted in step (c).

The most pertinent prior art has been presented. The prior art does not teach the claimed invention. Pratt et al. (US 2003/0194589 A1) at the very least does not teach or fairly suggest an operation control means configured to decide scheduled start-up time of said fuel cell based on the load value data predicted by said load value predicting means. Yamashita et al. (JP 2002-190308) at the very least does not teach or fairly suggest a load predicting means configured to predict a load value which is going to be generated based on a history of the load value.

With regard to Claim 1, the closest prior art does not teach or fairly suggest a fuel cell system comprising a *load value predicting means* configured to *predict a load value which is going to be generated based on the history of the load value* and to store the predicted load value as load value data; and an *operation control means* configured to *decide scheduled start-up time of said fuel cell based on the load value data predicted by said load value predicting means*.

With regard to Claim 60, the closest prior art does not teach or fairly suggest a method of operating a fuel cell system comprising the steps of *predicting a load value which is going to be generated based on the history of the load value* and storing the predicted load value as load value data; and, *deciding scheduled start-up time of said fuel cell based on the load value data predicted in the above step*.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
